

BREAK OUT SESSION

Construction – Permitting

- Permitting Coverage and Requirements

- How are you dealing with staff shortages and lack of expertise (e.g. when an engineer might be needed)?

- How are states incorporating retention requirements into their construction permits?

- How are states integrating post-construction into their CGP?

- How are states coordinating post-construction CGP requirements with the MS4 permit requirements?

- Permitting Coverage and Requirements

- How are states requiring specific BMPs for specific situations including:

- maintenance/replacement requirements

- defining “common plan of development”

- overcoming challenges of operators not submitting NOTs

- simplifying/streamlining natural buffer requirements in general permits

- How is turbidity benchmark monitoring implemented when the benchmark is relative to background?

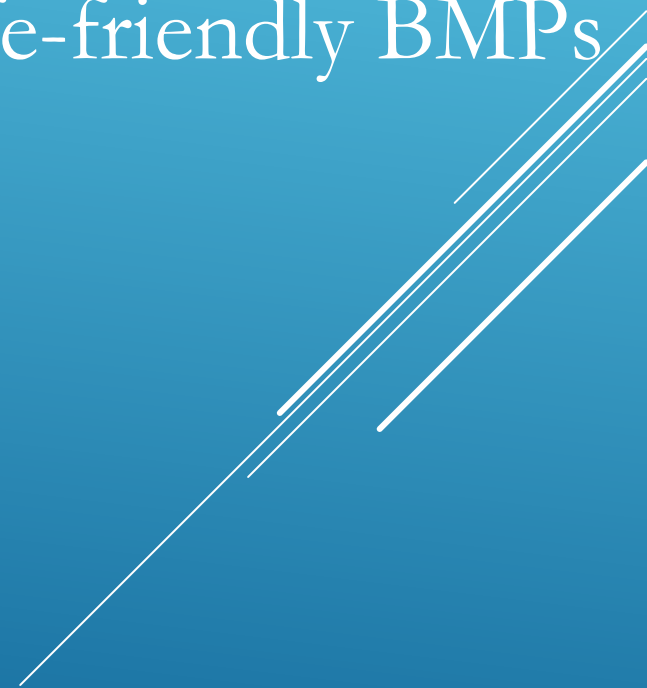

- Permitting Coverage and Requirements
 - How are states handling “No Discharge” on samples during multiple quarters?
 - How are states handling post-construction for DOT’s?
 - Is anyone regulating stormwater quantity?
 - Which permitting authorities are looking at ways to integrate climate change and resiliency considerations into their construction stormwater permits?
- 

- Innovative Programs

- Is any state creating a directory for new BMPs?

- How are states handling contingency planning for severe weather/mitigating debris and hazards created by temporary BMPs?

- Is any state promoting and/or requiring wildlife-friendly BMPs (and other similar BMPs) in general permits?

▶ **The End**
