- Permitting Coverage & Requirements
  - How are you dealing with staff shortages and lack of expertise (e.g. when an engineer might be needed)?
  - How are permitting authorities incorporating the change to the "Urbanized Area" definition?
  - How much progress are states making with identifying and getting their new Small MS4s under permit coverage?
  - How are states handling the lack of maps from the Census updates?
  - What are states doing with BMP Accounting and Tracking?
  - How are permitting authorities dealing with stormwater retrofit requirements for existing development?
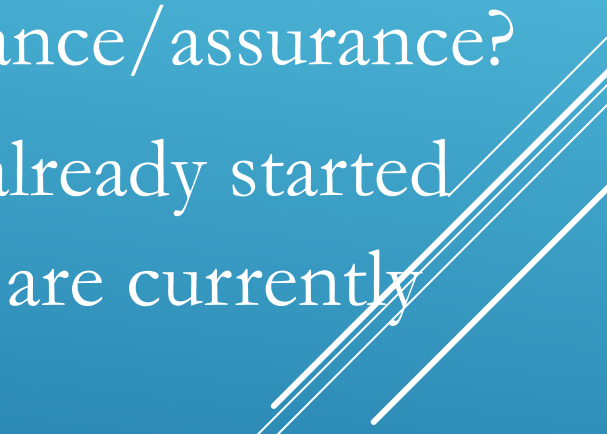

o Permitting Coverage & Requirements

    o How are permitting authorities incorporating TMDL Requirements into MS4 Permits?

    o How are you determining narrative effluent limitations (BMPs/activities) with no relevant TBELs/WQBELs?

    o What are permitting authorities doing about actionable BMPs for Trash-Free Waters?

- Innovative Programs
  - Are there any permitting authorities with a directory of Communication/Outreach materials?
  - Are there any states that can point to successful efforts to increase participation in the stormwater programs?
  - How are permitting authorities making LID/GSI attractive to developers?
  - Which states are incorporating PFAS sampling/source reduction?

- Innovative Programs
    - Have any permitting authorities identified a transferable process they think would work well for any of the Emerging contaminants? How are you getting permittees to help with identification, knowing the risk that exists if the contaminants are found?
    - Anyone using new approaches for compliance assistance/assurance?
    - Which permitting authorities or municipalities have already started integrating some sort of trading program and which are currently thinking about it in their next permits?

- Future Considerations
  - Has anyone heard about NNCR for Non-Submittal of Reports? (Not Currently Tracked)
  - How are permitting authorities addressing Chloride?
